DETAILED ACTION

Applicant is advised that the Notice of Allowance mailed on 10/31/2005 is vacated. If the issue fee has already been paid, applicant may request a refund or request that the fee be credited to a deposit account. However, applicant may wait until the application is either found allowable or held abandoned. If allowed, upon receipt of a new Notice of Allowance, applicant may request that the previously submitted issue fee be applied. If abandoned, applicant may request refund or credit to a specified Deposit Account.

The indicated allowability of claims 1-5 is withdrawn in view of the newly discovered reference(s) to Discenzo (US 6434512B1).

Rejections based on the newly cited reference(s) follow.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Discenzo (US 6434512B1) and in view of Hartel et al. (US 5454074A).

Art Unit: 3663

Discenzo disclose a system/method of performing a maintenance check of a vehicle such as an aircraft. Said system/method is provided for collecting and processing data relating to a plurality of subsystems of a dynamic system of a vehicle such as aircraft (Discenzo, abstract; column 25, lines 29-34), including:

“Obtaining and logging warrant-based reliability data from maintenance records generated during the performance of any routine or non-routine tasks that may exist, and which pertain to rotatable parts of the aircraft; obtaining and logging maintenance program-based reliability data from maintenance records generated during the performance of any non-routine tasks that may exist; obtaining and logging maintenance program-based reliability data from maintenance records generated during the performance of any identified routine tasks that may exist; and analyzing and reporting the warranty based reliability data and the maintenance program-based reliability data” (Discenzo, abstract; column 3, lines 14-29; column 9, lines 45-49).

Discenzo does not disclose the act of “identifying for each non-routine task, a routine task whose performance resulted in the generation of the non-routine task”.

The reference to Hartel et al. (US 5454074A) directs to a check list procedure performed during aircraft maintenance, comprising: a menu screen (Hartel et al, figure 4) showing a normal checklists and non-normal checklists. A normal task whose performance resulted in the generation of the non-normal task (Hartel et al., column 15, lines 61-67; column 16, lines 1-4).

It would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the system of Discenzo to include the teachings as taught

Art Unit: 3663

by Hartel et al. to gain advantage therefore (i.e., an authorized team could successfully performed their jobs by resolving the mechanics problems may exists on an aircraft, and also identify what kind of maintenance is needed).

Allowable Subject Matter

Claims 6-10 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
